

## Bonus: - Visualization critique of Assignment 1

Original Visualization:-

The above visualization shows the reason why Djokovic performs so well in Australian Open Finals. After learning a lot of the visualization techniques, I have realized some of the positives and negatives of this infographic.

Strengths:

- Clean and descriptive design
- The blue color used in the background is similar to the blue color on the Melbourne court, so it strikes some similarity

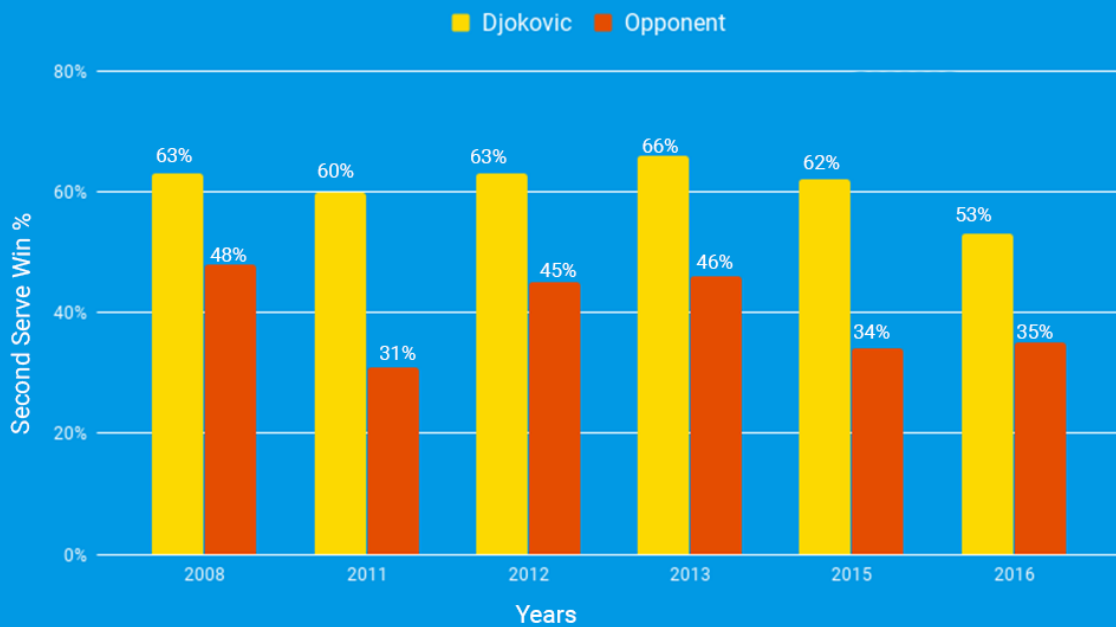

Weaknesses:

- Contrasting colors haven't been used for the bar graphs
- Axis Labels not present

- Why the second serve is important is mentioned as a 'Did you know?'. The title should be more descriptive

## Why is Djokovic invincible in Australian Open finals?

### Second Serve Win %

#### Importance of the second serve

During a player's second serve, he is under pressure, trying to avoid a double fault, so he serves at a lower speed, giving his opponent the control of the game. Hence, it is the opponent's point to lose. On the other hand, a first serve is where the player dictates the game of the play, forcing his opponent to areas which are difficult.
